Maruti Bandagar

Pune 411037, India | maruti.bandagar@yahoo.com | +917755919112 | LinkedIn

Full-Stack Developer with about 2 years of experience specializing in Java, TypeScript, and Cloud Infrastructure. Proven expertise in modernizing legacy architectures, building AI-integrated systems, and automating enterprise workflows. Highly skilled in the full software development lifecycle (SDLC) within agile environments, with a focus on delivering scalable, containerized solutions.

Profile

Business-oriented Full-Stack Developer experienced in building end-to-end solutions across Java, TypeScript, Python, and PHP ecosystems using Spring Boot, Angular, Next.js, Laravel, and Express.js. Proven in fast-paced startup environments, taking ownership of AI prototypes, data engineering pipelines, legacy modernization, and scalable cloud-native systems. Adaptable and execution-focused, I step into any role required to deliver reliable technology solutions that drive business impact.

Professional Experience

Software Developer, EstateHub, Pune

May 2024 to Present

- Prototyped an AI-driven thesis-evaluation system and built ML pipelines to automate assessment workflows.
- Led modernization of legacy codebases — migrated frameworks and refactored code to restore functionality and reduce maintenance overhead.
- Designed and implemented a dynamic proposal engine that auto-generates customized PowerPoint and Excel documents from user inputs.
- Provisioned and managed GCP and AWS infrastructure, optimizing configurations for scalability, monitoring, and reliability.
- Diagnosed and resolved payment-gateway issues, reducing transaction failures and improving financial data integrity.
- Built ETL and web-scraping pipelines to aggregate real-estate data for AI training and large-scale migrations.
- Developed an automated invoice-management system to generate, store, and deliver invoices for enterprise workflows.
- Spearheaded Docker-based containerization to ensure environment parity across development, staging, and production.

Projects

1) JobStream AI | Express.js, BullMQ, Qdrant Vector DB

- Architected a distributed web crawling system utilizing a worker-producer model to handle high-volume asynchronous data ingestion.
- Integrated Qdrant Vector Database to implement semantic search, allowing users to find job opportunities through natural language queries with high relevance.

2) Indian ID Validator (NPM Package) | TypeScript, Vite

- Engineered and published a robust open-source library for validating Indian government IDs (Aadhaar, PAN, GST).
- Configured a modern build pipeline for both CommonJS and ES module distributions, achieving superior developer experience and type safety.

3)Lead Management System API | Node.js, MongoDB, Redis, Docker

- Developed a secure, containerized lead management API featuring JWT-based role-based access control (RBAC).
- Utilized Zod for strict input validation and Redis for efficient caching, ensuring high performance under load.

Education

Savitribai Phule Pune University, Pune

BSC, Jan 2021 to Oct 2024
